

# Learn Complete Python In Simple Way

# SEE STUDY MATERIAL

- If we want to represent a group of unique values as a single entity then we should go for set.
- Duplicates are not allowed.
- Insertion order is not preserved. But we can sort the elements.
- Indexing and slicing not allowed for the set.
- **+** Heterogeneous elements are allowed.
- Set objects are mutable i.e once we creates set object we can perform any changes in that object based on our requirement.
- ❖ We can represent set elements within curly braces and with comma seperation
- We can apply mathematical operations like union, intersection, difference etc on set objects.

### **Creation of Set Objects:**

- 1) s={10,20,30,40}
- 2) print(s)
- 3) print(type(s))

### Output

```
{40, 10, 20, 30}
```

<class 'set'>

We can create set objects by using set() Function s = set(any sequence)

### Eg 1:

- 1) I = [10,20,30,40,10,20,10]
- 2) s=set(I)
- 3) print(s) # {40, 10, 20, 30}

### Eg 2:

- 1) s=set(range(5))
- 2) print(s) #{0, 1, 2, 3, 4}

### Note:

- Mhile creating empty set we have to take special care.
- Sompulsory we should use set() function.
- $\S$  s = {}  $\rightarrow$  It is treated as dictionary but not empty set.
  - 1) s={}
  - 2) print(s)
  - 3) print(type(s))

### **Output**

{}

<class 'dict'>

### Eg:

- 1) s=set()
- 2) print(s)
- 3) print(type(s))

### Output

set()

<class 'set'>

### **Important Functions of Set:**

### 1) add(x):

Adds item x to the set.

- 1) s={10,20,30}
- 2) s.add(40);
- 3) print(s) #{40, 10, 20, 30}

### 2) <u>update(x,y,z):</u>

- To add multiple items to the set.
- Arguments are not individual elements and these are Iterable objects like List, Range etc.
- All elements present in the given Iterable objects will be added to the set.
  - 1) s={10,20,30}
  - 2) I=[40,50,60,10]
  - 3) s.update(l,range(5))
  - 4) print(s)

Output: {0, 1, 2, 3, 4, 40, 10, 50, 20, 60, 30}

## Q) What is the difference between add() and update() Functions in Set?

- We can use add() to add individual item to the Set, where as we can use update() function to add multiple items to Set.
- add() function can take only one argument where as update() function can take any number of arguments but all arguments should be iterable objects.

### Q) Which of the following are valid for set s?

- 1) s.add(10)
- 2) s.add(10,20,30) → TypeError: add() takes exactly one argument (3 given)
- 3) s.update(10) → TypeError: 'int' object is not iterable
- 4) s.update(range(1,10,2),range(0,10,2))

### 3) copy():

- Returns copy of the set.
- It is cloned object.
  - 1) s = {10,20,30}
  - 2) s1 = s.copy()
  - 3) print(s1)

### 4) pop():

It removes and returns some random element from the set.

- 1) s={40,10,30,20}
- 2) print(s)
- 3) print(s.pop())
- 4) print(s)

### Output

```
{40, 10, 20, 30}
40
{10, 20, 30}
```

### 5) <u>remove(x):</u>

- It removes specified element from the set.
- If the specified element not present in the Set then we will get KeyError.
  - 1) s = {40, 10, 30, 20}
  - 2) s.remove(30)
  - 3) print {◊(s) 40, 10, 20}

4) s.remove(50 KeyError: ◊) 50

### 6) discard(x):

- 1) It removes the specified element from the set.
- 2) If the specified element not present in the set then we won't get any error.
  - 1) s = {10, 20, 30}
  - 2) s.discard(10)
  - 3) print {◊(s) 20, 30}
  - 4) s.discard(50)
  - 5) print {◊(s) 20, 30}
- Q) What is the difference between remove() and discard() functions in Set?
- Q) Explain differences between pop(),remove() and discard() functions in Set?

### 7) clear():

To remove all elements from the Set.

- 1) s={10,20,30}
- 2) print(s)
- s.clear()
- 4) print(s)

### **Output**

{10, 20, 30} set()

### **Mathematical Operations on the Set:**

### 1) <u>union():</u>

- x.union(y) → We can use this function to return all elements present in both sets
- x.union(y) OR x|y.
  - 1) x = {10, 20, 30, 40}
  - 2) y = {30, 40, 50, 60}
  - 3) print (x.union(y))  $\rightarrow$  {10, 20, 30, 40, 50, 60}
  - 4) print  $(x|y) \rightarrow \{10, 20, 30, 40, 50, 60\}$

### 2) intersection():

- x.intersection(y) OR x&y.
- Returns common elements present in both x and y.

https://www.youtube.com/durgasoftware

- 1)  $x = \{10, 20, 30, 40\}$
- 2) y = {30, 40, 50, 60}
- 3) print (x.intersection(y))  $\rightarrow$  {40, 30}
- 4) print(x&y)  $\rightarrow$  {40, 30}

### 3) difference():

- x.difference(y) OR x-y.
- Returns the elements present in x but not in y.

```
1) x = {10, 20, 30, 40}
```

- 2) y = {30, 40, 50, 60}
- 3) print (x.difference(y))  $\rightarrow$  10, 20
- 4) print  $(x-y) \rightarrow \{10, 20\}$
- 5) print  $(y-x) \rightarrow \{50, 60\}$

### 4) symmetric\_difference():

- x.symmetric\_difference(y) OR x^y.
- Returns elements present in either x OR y but not in both.

```
1) x = {10, 20, 30, 40}
```

- 2) y = {30, 40, 50, 60}
- 3) print (x.symmetric\_difference(y))  $\rightarrow$  {10, 50, 20, 60}
- 4) print(x^y)  $\rightarrow$  {10, 50, 20, 60}

### **Membership Operators: (in, not in)**

- 1) s=set("durga")
- 2) print(s)
- 3) print('d' in s)
- 4) print('z' in s)

### **Output**

```
{'u', 'g', 'r', 'd', 'a'}
True
```

**False** 

### **Set Comprehension:**

Set comprehension is possible.

- 1)  $s = \{x*x \text{ for } x \text{ in range}(5)\}$
- 2) print (s)  $\rightarrow$  {0, 1, 4, 9, 16}
- 3)

- 4)  $s = \{2**x \text{ for } x \text{ in range}(2,10,2)\}$
- 5) print (s) → {16, 256, 64, 4}

### **Set Objects won't support indexing and slicing:**

- 1)  $s = \{10,20,30,40\}$
- 2) print(s[0]) → TypeError: 'set' object does not support indexing
- 3) print(s[1:3]) → TypeError: 'set' object is not subscriptable

### Q) Write a Program to eliminate Duplicates Present in the List?

### Approach - 1 Approach - 2 1) I=eval(input("Enter List of values: ")) 1) I=eval(input("Enter List of values: ")) 2) s=set(I) 2) |1=[] 3) print(s) 3) for x in l: 4) if x not in l1: D:\Python classes>py test.py 5) l1.append(x) Enter List of values: [10,20,30,10,20,40] 6) **print(I1)** {40, 10, 20, 30} D:\Python\_classes>py test.py Enter List of values: [10,20,30,10,20,40] [10, 20, 30, 40]

# Q) Write a Program to Print different Vowels Present in the given Word?

- 1) w=input("Enter word to search for vowels: ")
- 2) s=set(w)
- 3) v={'a','e','i','o','u'}
- d=s.intersection(v)
- 5) print("The different vowel present in",w,"are",d)

D:\Python\_classes>py test.py
Enter word to search for vowels: durga
The different vowel present in durga are {'u', 'a'}
